“Healthy Brain Aging and Recent Advances in the Treatment of Alzheimer’s disease”

*Presentation by Dr. Armen Moughamian,
Medical Director of Ray Dolby Brain Health Center*

Recent evidence has shown that up to 40% of dementia is modifiable. Dr Armen Moughamian, a cognitive neurologist and the medical director from the Ray Dolby Brain Health Center at the California Pacific Medical Center (CPMC) in San Francisco will review the different modifiable risk factors for dementia and discuss how to promote healthy brain aging. These modifiable risk factors include early life education to treatment of vascular disease later in life. Dr Moughamian will discuss the evidence for the modification of dementia and approaches to treatment of these risk factors.

Also, on June 7th the FDA approved a new medication for the treatment of Alzheimer’s disease. There has been some controversy regarding this medication in the news. Dr Moughamian will give perspective regarding the medication and its potential use for the treatment of Alzheimer’s disease.

“Developing the Roadmap on Dementia”

*Presentation by Dana Graefe, MS HFA,
Director of Resident Services at The Forum*

Dana will kick off the CLF Memory Care Speaker Series with a presentation on the many facets to dementia and dementia care - from which type of dementia an individual is diagnosed with to care options, associated costs and available local resources. She will develop a roadmap for people to understand what they may expect when facing a dementia diagnosis.
